---

## **Abstract**

This online appendix tabulates the results of robustness checks mentioned in the paper.

---

**Table A.1**

Maturity: robustness.

This table presents robustness checks for the regressions reported in Table 5. Panel A drops all observations for bonds that were issued in Orleans Parish. Panel B also drops all observations for bonds issued in coastal counties that are not assigned a climate risk in Hallegatte et al. (2013). The dependent variable is the total annualized issuance cost of a municipal bond. *t*-statistics, based on errors clustered by county, are in parentheses.

**Table A.2**

Maturity: yield and gross spread.

This table presents results for yield and gross spread separately for the regressions reported in Table 5. Panel A shows results for the long-term specifications. Panel B shows results for short-term specifications. Columns 1 through 5 report results for yield. Columns 6 through 10 report results for gross spread. *t*-statistics, based on errors clustered by county, are in parentheses.

**Table A.3**

Placebo tests: yield and gross spread.

This table presents results for the regressions shown in Table 6 with yield and gross spread reported separately. Panel A shows results for various long-term specifications for the geographic matching placebo tests. Panel B shows results for various long-term specifications for the nearest neighbor matching placebo tests. The results for yield are reported in columns 1 through 6, and the results for gross spread are reported in columns 7 through 12. *t*-statistics, based on errors clustered by county, are in parentheses.

\*\*\*  $p < 0.01$ , \*\*  $p < 0.05$ , \*  $p < 0.1$
